

## Instructions for loading and transporting of wooden racks.

1. Wooden racks can be loaded only by forklift. Transportation of racks by crain is absolutely forbidden.
2. Racks on truck can be placed individually or in rows of 2 or 3. It depends on the width of the stands. If the glass do not stick out of the rack, racks can be set to touch each other.
3. All racks on the trailer should be secured with transport straps. Each rack / row of stands should be secure with at least 2 transport straps. The final number of straps used will depend on their technical data in relation to the tonnage of the loaded goods and is at driver`s reasonability.
4. Transport belts should be placed in destinated places, i.e. on the "runners" or on the sides of the stand. The belts cannot touch the edges of the glass placed on the stand.

5. Racks must not be secured with transport belts by running the belt along the top of the racks.
