## WHO ARE WE?

The NSG Group is a global leader in glass manufacturing in three business areas: Architectural, Automotive and Technical Glass.

Our mission is to be the global leader in innovative high-performance glass and glazing solutions, working safely and ethically.

## THE ROLE

The Manufacturing team is responsible for the safe operation of a range of prototype manufacturing process equipment including pre-process line, printing, bending furnaces, lamination and final inspection, within the R&D prototyping facility. The role includes operation of the process equipment in conjunction with other technologists from across R&D to support new product and new process development projects as well as technical support work.

Responsibilities include adherence to all safety and quality requirements, operation of any of the facility equipment, operator-based preventative maintenance, control of relevant direct and indirect materials, writing of quality documentation including SOPs and production records and the movement of glass and components within the facility.

The quality requirements for products must be fully understood and the impact of process control on delivering the product quality is fundamental. To this end, various tests and measurements must also be performed as part of control plans for the processes and to support the development of products. The technologist role will additionally require individuals to have an in-depth understanding of the particular key processes and equipment within their area of responsibility in order to develop the processes and identify deviations and improvements.

## WHAT ARE WE LOOKING FOR?

### You

- Good organisational, time management and team working skills.
- Strong commitment to quality, and health and safety compliance
- Computer literate
- Actively seeks to understand internal and external customer circumstances, problems, expectations and needs

### Your Technical Skills

- Experience in glass handling and processing within an industrial setting.
- Experience in pre-process cutting lines, printing equipment, furnaces for toughening and/or bending or operation of autoclaves or ovens for glass lamination processes.
- A forklift truck driving licence would be advantageous

### Benefits

- 25 days holiday
- Pension Scheme
- Flexible Working
- Bonus Scheme
- Free on-site car parking
- On-site canteen
- On site fitness activities and events

***We will train you in any of the skills you don't currently have!***

A full UK driving licence and car ownership would be an advantage due to limited public transport to the site.
