	Classification Report Durability of Class A, B and S coatings as specified in EN 1096-2	ift	
	Test Report 603 30373/3e	ROSENHEIM	
Client	Pilkington plc Technical Centre Hall Lane Lathom Ormskirk	Basis EN 1096-2 : 2001-05 Glass in Building; Coated glass; Requirements and test meth- ods for class A, B and S coat- ings	
	Lancashire L40 5UF United Kingdom	Instructions for use	
Product	Glass coating as spec. in EN 1096-2, Class B	 This test report helps in assess- ing whether, over an extended period of time, the loading from 	
Designation Ext. dimensions (W x H) Total thickness	Energy Advantage [™] 300 mm x 300 mm 4 mm	 solar radiation leads to major changes in the transmission of light and sun by the coated glass and, with coatings with a low emission capacity, to a re- duction in the infrared reflection. 	
Position of coat- ing	2 alternatively 4		
		Validity The data and results given re- late solely to the tested and described test specimen.	

The coating Energy Advantage [™] meets the requirements of EN 1096-2, Class B

Notes on Publication

The **ift** – Guidance Sheet "Conditions and Guidance for the Use of **ift** Test Documents" applies.

The cover sheet can be used as abstract.

1 Object

1.1 Description of test specimen

Product	Class B coating as specified in EN 1096-2 on float glass
Manufacturer	Pilkington plc, Lancashire L40 5UF
Manufacture date	July 2005
Product designation	Low E Energy Advantage [™] , Run 1310 M 944
Layer composition	is deposed at ift Rosenheim
External dimensions (w x h)	300 mm x 300 mm
Total thickness	4 mm
Coating level	Position 2, alternatively Position 4

The description is based on inspection of the test specimen at **ift**. Article designations/numbers as well as material specification were given by the customer.

2 Procedure

2.1 Sampling

The samples were selected and prepared by the customer

Quantity	6
Delivered	16 August 2005 by the customer
Registration No.	18742

2.2 Process

Technical basics:	
EN 1096-2 : 2001-05	Glass in building; Coated glass; Requirements and test meth- ods for class A, B and S coatings
Boundary conditions	As specified by the standard requirements
Deviations	There are no deviations from the test procedure and/or test conditions.

2.3 Test equipment

Hot water container	Appliance number 22446
Temperature measurement	Appliance number 22863
Testing device for abrasion test	Appliance number 22623
IR Spectrometer	Appliance number 22143
UV/VIS Spectrometer	Appliance number 22133

Artificial sky as specified in EN 1096-1 for visual check.

The testing devices for the acid resistance test and neutral salt spray test have been provided by the company FEM, Schwäbisch Gmünd.

2.4 Testing

Date/Period	23 August to 26 September 2005
Testing personnel	Irina Hausstetter

Description of tests:

Condensation resistance test

Storage of the test specimens at 100 % humidity and at a temperature of $(40 \pm 1,5)$ °C; Period: 4 days

Acid resistance test

The test was carried out according to Annex C of EN 1096-2. The test specimen were stored in an atmosphere saturated with SO_2 at constant high temperature with condensation at the surface and an ambient temperature without condensation on the surface. The test consists of one cycle of 24h.

Neutral salt spray test

The stress in NaCl-atmosphere (50±5)g/l and a temperature of (25±2) °C was applied according to EN 1096, Part 2, Annex D. The total time of stress is 10 days.

Abrasion resistance test

The coating will be stressed in a device with a felt pad. The felt pad describes a linear movement overlaid by a rotation. After 50 strokes the surface will be checked on visible changes.

After these tests the coatings will be evaluated visually and photometric according to EN 1096-2. The photometric measurements will be carried out at 550 nm and 900 nm in transmission, the reflexion will be measured at 8 μ m.

3 Detailed results

3.1 Measurement of Transmission

The results of transmission at 550 nm and 900 nm, measured on a reference sample and an exposed sample, will be compared for the evaluation according to EN 1096-2.

Table 1 shows the results of the transmission measurements.

		Transmission					
Type of stress	Sample- No.	Reference samples		Exposed samples			
		550 nm	900 nm	550 nm	900 nm		
Condensation	1.1	-	-	0,82	0,67		
resistance	1.2	-	-	0,82	0,68		
	1.3	-	-	0,82	0,68		
	1.4	-	-	0,82	0,68		
	1.5	0,82	0,67	-	-		
	1.6	0,82	0,67	-	-		
	Average	0,82	0,67	0,82	0,68		
Acid	2.1	-	-	0,82	0,67		
resistance	2.2	-	-	0,82	0,67		
	2.3	-	-	0,82	0,67		
	2.4	-	-	0,82	0,67		
	2.5	0,82	0,67	-	-		
	2.6	0,82	0,67	-	-		
	Average	0,82	0,67	0,82	0,67		
Neutral salt	3.1	-	-	0,82	0,67		
spray test	3.2	-	-	0,82	0,68		
	3.3	-	-	0,82	0,67		
	3.4	-	-	0,82	0,68		
	3.5	0,82	0,68	-	-		
	3.6	0,82	0,67	-	-		
	Average	0,82	0,68	0,82	0,68		
Abrasion	4.1	-	-	0,83	0,67		
resistance	4.2	-	-	0,82	0,68		
	4.3	-	-	0,82	0,67		
	4.4	-	-	0,83	0,68		
	4.5	0,82	0,68	-	-		
	4.6	0,82	0,67	-	-		
	Average	0,82	0,68	0,83	0,68		

Table 1Transmission

3.2 Emissivity

The results of the emissivity at 8 μ m, measured on a reference sample and an exposed sample, will be compared for the evaluation according to EN 1096-2.

Table 2 shows the results of the emissivity measurements.

Type of stress	Sample-No.	Reflection at 8 µm		
		Reference samples	Exposed samples	
Condensation	1.1	-	0,84	
resistance	1.2	-	0,84	
	1.3	-	0,84	
	1.4	-	0,84	
	1.5	0,84	-	
	1.6	0,84	-	
	Average	0,84	0,84	
Acid	2.1	-	0,84	
resistance	2.2	-	0,84	
	2.3	-	0,84	
	2.4	-	0,84	
	2.5	0,84	-	
	2.6	0,84	-	
	Average	0,84	0,84	
Neutral salt	3.1	-	0,84	
spray test	3.2	-	0,84	
	3.3	-	0,84	
	3.4	-	0,84	
	3.5	0,84	-	
	3.6	0,84	-	
	Average	0,84	0,84	

Table 2Emissivity

3.3 Visual Check

The visual check was made from a distance of 600 mm against a diffuse illuminated background (artificial sky). On the coatings no visual changes, rifts, scratches or discolourations were identifiable.

4 Evaluation

A summary of the results, determined according to EN 1096-2, is presented in Table 3.

Table 3Overview of the results

Measurements	Reference sample (1)	Average value of the exposed samples (2)	Deviation (3) = (1) – (2)	Limit value for deviation	
Condensation resistance					
Transmission at 550 nm	0,82	0,82	0	± 0,03	
Transmission at 900 nm	0,67	0,68	- 0,01	± 0,03	
Reflection at 8 µm	0,84	0,84	0	≤ 0,02	
Visual check	nc	no changes detected			
Acid resistance					
Transmission at 550 nm	0,82	0,82	0	± 0,03	
Transmission at 900 nm	0,67	0,67	0	± 0,03	
Reflection at 8 μ m	0,84	0,84	0	≤ 0,02	
Visual check	nc	no changes detected			
Neutral salt spray test					
Transmission at 550 nm	0,82	0,82	0	± 0,03	
Transmission at 900 nm	0,68	0,68	0	± 0,03	
Reflection at 8 µm	0,84	0,84	0	≤ 0,02	
Visual check	nc	no changes detected			
Abrasion resistance					
Transmission at 550 nm	0,82	0,83	-0,01	± 0,05	
Transmission at 900 nm	0,68	0,68	0	± 0,05	
Visual check	uniform	uniform abrasion on the coating		-	

In evaluation of the results given in Table 3 the coating

Energy Advantage [™]

meets the requirements of EN 1096-2, class B.
